

Workshop: EXTENSIVE APPLICATION OF THERABAND IN CLINICAL SETTINGS

23-24 September 2016

The workshop was arranged for BPT IV year students at the Institute. The workshop taught the students various uses of theraband and stability devices. This platform gave the opportunity to see and perform various exercises that could be applied on the patients and how they improve the quality of treatment and adds variety to the exercises protocol.

Dr Malhotra gave comforting atmosphere to the students and answered their queries without any hesitation.

It was very overwhelming to see students enjoying their learning and their demand to have more such workshops in future said it all...
