

Editorial

Vol. 04 | Issue 03 | July - September 2012

Dear Readers,

I am honored to release this issue of our prestigious journal, which is an effort to bring together significant researches and to broaden the horizon of evidence based practice. The journal provides a medium for researchers to put forth new researches and at the same time is a source of inspiration for budding "young brains" with oodles of gray matter to channelize their thinking ability and give new dimensions to it.

Special highlight of this issue is article by Dr. Manish Arora title "A CORRELATIVE STUDY BETWEEN SUPINATION OF FOREFOOT AND PATELLAR TRACKING IN DOMINANT LOWER LIMB IN NORMAL SUBJECTS".

I thank authors for their contribution and also congratulate the editorial team for their efforts.

On behalf of this my colleagues & contributors of this publication, Welcome!

Sanjeev Gupta
Editor-in-Chief

Contents

- | | | |
|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
|  | Comparison of Efficacy of Cough Assist and Conventional Chest Physiotherapy vs. Conventional Chest Physiotherapy on RPP, FEV ₁ /FVC, FEF _{25-75%} and SpO ₂ in COPD Patients.
